-Three-word phrases/sentences: NA

FEEDING
Feeding History
Able to latch - was breastfed for 1 month before baby switched to bottle + formula
Has been followed up post discharge with on call nurse. Issue encountered mostly parent craft related.
Bottle: Pigeon wide neck soft touch bottle, size 0 teat
Type of feed: Formula (Lactogen and Similac), and only 1 EBM feed per day (as mother's supply insufficient)
Amount & Frequency: 70-90mls / 2.5-3hrly
Parents have been mixing 2 formulas according to their own ratio: 3/4scoop Lactogen and 3/4 scoop Similac to 60mls water
As parents felt Similac causes patient to have constipation
Noticed occasional regurgitation once every few days
Lip Taping: Not necessary

Feeding Assessment at 1623hrs by CCRC nurses on 10/10/24-
Physical State: Alert /Fussing for milk
Postioning: Upright supported sitting (cradled in mother's arms)
Strength of Suck: Good
Lip Seal: Good
Chin Support: No
Suck : Swallow: Breathe Coordination: 1:1:1
Duration: 15mins
Amount Taken: 60mls
No signs of: Regurgitation/Vomitting/Gagging/Coughing
