Speech Therapy Paediatric Review – KKH CCRC (28 Apr 2026)

Oct 12, 2026 · @Viola

Visit details

Item	Detail
Visit date and time	28 Apr 2026, 16:46
Location	KKH Children's Craniofacial Centre (CCRC)
Visit ID	7724198169A0018
Child's age	2;1
Referring doctor	Dr Vincent Yeow Kok Leng (048901), Plastic, Reconstructive & Aesthetic Surgery (PRAS)
Attended with	Parents and older brother
Treating speech therapist	Jasmine Teo Lee Ping
Student observer	Ethan
Session language	English
Note status	Complete, revised, signed in full (28 Apr 2026, 18:38)

Medical history

Diagnoses

- Bilateral microform cleft lip (left more than right)
- Infantile eczema

Other past medical history: Nil

Birth history

Item	Detail
Birth weight	2570 g
Gestation	39 weeks
Mode of delivery	Normal vaginal delivery
G6PD deficiency	No
Mother Hep B carrier	No

Surgery: Left microform cleft lip repair planned for 11 June 2026 (upcoming at time of visit).

On follow-up with

- KKH Plastic Surgeon (Dr Yeow)
- KKH CCRC Speech Therapy (Jasmine Teo / Gladys Tan)
- KKH Dermatology
- KKH Paediatric Dentist

Previous assessment or intervention: Nil

Audio-video recordings and nasalance scores: Nil

Pain: No pain reported.

Subjective

Main concerns: Fewer words than her older brother had at the same age, and pronunciation of words.

Developmental milestones

Domain	Milestone	Parent report
Motor	Flip over	~6 months
Motor	First steps, unsupported	~12 months, walks short distances
Motor	Overall	Mother cannot recall details; all milestones reported on time

Domain	Milestone	Parent report
Language	Babbling	Cannot recall; reported babbling by 1 year
Language	First words	Unsure
Language	Two-word combinations	2 years
Language	Three-word phrases or sentences	Not yet (NA)

Current status (parent report, age 2;1)

Expressive language

- Vocabulary improved after starting school in late Dec 2025
- Parents feel pronunciation is still not that good
- Combines 2-3 words, e.g. "mama mei mei", "one more time", "bu yao kan dian hua"
- Uses more Mandarin than English
- Wants to join parents' conversations but may not be intelligible; uses a combination of jargon and gestures
- Sings or hums along to music, dances and moves to music
- Calls out to get parents' attention; shows behaviours (showing objects)
- More keen to imitate words and phrases now
- Uses gestures or sounds to make herself understood

Receptive language

- Follows 2-step instructions
- Recognises common animals, e.g. bird, chicken

Hearing: No concerns

Speech: More than 50% intelligible to mother and father with context

Feeding: Self-feeds and wants to self-feed; able to suck through a straw

Social, language and educational background

Language background

- Home languages: Mandarin and English, mostly Mandarin
- Dominant language: not yet established

Education

- Playgroup in 2026; started school in late Dec 2025
- Parents had planned to wait until after surgery, but with surgery delayed she will attend once a spot is secured
- Teacher's feedback: getting better

Family

- Lives with parents and older brother (born 2018, developmentally well)
- Mother works part time; father works full time
- Main caregivers: babysitter, mother and maternal grandmother. On weekdays, mother brings the child and babysitter to grandmother's house
- No fixed routine. Typical day: milk, send brother to school, breakfast (bread or biscuit), babysitter at grandmother's house while mother works, lunch at ~11 am, then downstairs outing (child enjoys this)
- No screen time except when she peeps at her parents' screens

Family history of cleft or language, learning delays or disorders

- Cleft: nil
- Father's cousin's son has ASD; paternal uncle's son has cerebral palsy

Family genogram: Needed (yes). No genogram image was included in the pasted note.

Objective

Clinical presentation: Shy and quiet initially. Seated on a high chair throughout the session. Cooperative with tasks and willing to imitate the therapist.

1. Toddler Phonology Test (TPT)

- Resonance: normal
- Voice: low volume but normal

Developmental process	Example
Fronting /g/ to /d/	girl to "dirl"
Substitution /f/ to /w/	fish to "wish"
Cluster reduction	

Developmental process	Example
Stopping	
Assimilation	rabbit to "babbit"

All processes noted are age-appropriate.

2. Informal language observation

- Requested help with Lego verbally (e.g. "mama, help me")
- Understood WHAT questions and responded appropriately
- Imitated single words from the therapist
- Followed one-step instructions without gestural cues
- Recognised common animals (e.g. bird, fish, cat)

Analysis and plan

Clinical summary

- Age-appropriate receptive and expressive language, based on parent report and informal observation
- Normal voice and normal resonance
- Age-appropriate consonant production

Plan

1. Review at CCRC Speech Therapy (TCU) in 6 months: PLS-5 and informal speech observation
2. Await lip repair (planned June 2026)
3. Dentist review (TCU) on 6 May 2026
4. Dermatology review (TCU) on 2 June 2026

Therapy needs level: 0

Patient and family education (conducted in English)

1. Assessment findings explained using the "Which Sound Develop When?" handout. Parents reassured that the speech errors are age-appropriate phonological errors, and that her language skills have caught up with peers of similar age.

2. Communication milestones (3 years) given as a guide to the next year, with strategies to build language.
3. Parents asked whether lip repair would affect expressive language. Explained that it should not be greatly affected; she may talk less in the first days after surgery because of pain, then return to her usual communication. Parents understood and appeared relieved.
4. Parents asked whether tongue tie would affect speech. Explained that it may affect certain sounds, but since she can extend her tongue beyond the lips, the impact should be small.
5. Management plan explained; parents verbalised understanding and agreed.

Australian Therapy Outcome Measures (AusTOMS)

Core area	Impairment	Activity limitation	Participation restriction	Distress / wellbeing
Language	5 (nil concerns)	5 (nil concerns)	5 (nil concerns)	5 (nil concerns)
Speech	5 (nil concerns)	5 (nil concerns)	5 (nil concerns)	5 (nil concerns)

Signed: Jasmine Teo Lee Ping (Speech Therapist), 28 Apr 2026, 18:38. Institution: KKH.
